PROFESSIONAL SUMMARY

Software Developer with 1.8+ year of production experience building full-stack web, mobile, and backend systems for a manufacturing company. Experienced across the full stack, building React/Next.js frontends, Flutter mobile apps, .NET Core APIs, and SQL Server databases. Known for shipping tools that solve real operational problems and translating hands-on domain knowledge into effective software.

TECHNICAL SKILLS

- **Languages:** JavaScript, Dart, C#, Python, Swift, HTML, CSS
- **Frontend & Mobile:** React, Next.js, Flutter, SwiftUI, Tailwind CSS
- **Backend & APIs:** Node.js, Express, .NET Core, REST APIs, SQL Server Stored Procedures
- **Databases:** SQL Server, PostgreSQL, MongoDB
- **Tools & Practices:** Git, Webpack, Vite, NPM, Agile/Scrum, CI/CD

EXPERIENCE

Tifco Industries

Software Developer

Houston, TX · Sep 2024 - Present

- Leading rewrite of Tifco.com from a legacy PHP monolith to a Next.js/React front end and .NET back end - development complete and currently in review with superiors
- Built a tablet-based Supervisor Workflow Admin Tool in Flutter, .NET Core, and SQL Server, enabling supervisors to assign tasks, surface bottlenecks, and resolve workflow issues in real time
- Rebuilt the internal Order Picking App in Flutter to replace a SwiftUI-only version, extending cross-platform support and broadening device compatibility across the warehouse floor
- Developed a Pack-Out Station App that scans and verifies items during final packing, introducing item-to-box traceability and reducing shipment errors
- Created a Packaging App for workers to receive tasks, print box labels, and route completed tubs to the conveyor - streamlining the final stage of the fulfillment process
- Extended internal REST APIs and SQL Server stored procedures to support all mobile app functionality, collaborating cross-functionally to ensure data integrity and performance

Order Selector

Houston, TX · Dec 2023 - Jan 2025

- Operated hand-held scanners to pick and pack high volumes of orders, consistently meeting daily KPIs
- Gained direct, first-hand knowledge of warehouse systems and operational pain points - insight later applied when building the internal tools used by the same team

PROJECTS

Book Search Engine

- Full-stack MERN application with user authentication - users can search books via the Google Books API, save favorites to a personal profile, and manage their reading list

Employee Tracker

- CLI tool for managing company org structure - departments, roles, and employees - via relational PostgreSQL queries and a terminal-based interface

Weather Dashboard

- Responsive weather app displaying current conditions and 5-day forecasts with persistent search history via local storage

EDUCATION

University of Texas at Austin

Aug 2024

Full-Stack Web Development Bootcamp

- **Coursework:** Full-stack JavaScript, RESTful APIs, React, Node.js, SQL & NoSQL databases, authentication, deployment
